

Printer Color Profile Instructions

Color profiles are data files that contain a description of how a particular paper, ink, and printer create all colors, shades, and densities. Using a profile will result in more accurate and consistent output.

Printer: Canon PRO-200

Setting Recommendations

Mode: Color / Intensity > Manual > Matching = None

Print Quality: High

Some Hints

 The name of the paper you are using will not be listed in the media setting drop down menu in the printer driver. That menu only has the names of manufacturer papers.

 Do not use the printer driver's "Preview before printing feature". It can interrupt the color management process.

Blanco Satin Canvas	Photo Paper Plus Semi-gloss
Baram / Noori Hanji	Matte Photo Paper

Handling Guides

Check our website to see if your paper has a Handling Guide. Guides contain important information and helpful tips. www.redriverpaper.com/guides

Color Profile Basics

⚠ More detailed and specific instructions are at www.redriverpaper.com/profiles

Key Concept #1

Color management consists of two primary systems – Your editing software and your printer driver.

Key Concept #2

Only one of the above systems can control color output at a time

Key Concept #3

When using a printer color profile, your editing software will be in control of color management. The printer driver controls must be disabled!

Editing Software Print Dialog

Tell your software you want it to manage color output and what color profile to use.

Photoshop Example

Lightroom Example

Printer Driver Setting – Media Setting

Choose the media setting recommended on page two of this guide.

Windows Example

Mac Example

Printer Driver Setting – Color Management

Disable the driver's color management system

Windows Example

Manual Color Adjustment > Matching = None

Mac Example

Grayed out means disabled by editing software

This is a brief look at the process. **Make sure** to visit www.redriverpaper.com/profiles for in-depth help.
