

Printer Color Profile Instructions

Color profiles are data files that contain a description of how a particular paper, ink, and printer create all colors, shades, and densities. Using a profile will result in more accurate and consistent output.

Printer: Epson SureColor P900

Setting Recommendations

Mode: Off No Color Adjustment

Print Quality: Quality Options / Level 3 (1440x1440) – High Speed optional

Some Hints

The name of the paper you are using will not be listed in the media setting drop down menu in the printer driver. That menu only has the names of manufacturer papers.

Do not use the printer driver's "Preview before printing feature". It can interrupt the color management process.

MEDIA SETTING RECOMMENDATIONS

 **THICK PAPER NOTE** – Products designated as “Thick Paper” (see Special column on next page) require your attention. For 8x10 and larger, use the Front Paper Feed. Smaller sizes must go through the Rear Paper Feeder with the Thick Paper setting active. See our [P900 guide](#) for more.

 **EMY FILES** – EMY stands for Epson Media Files. With newer Epson printers, important information such as paper thickness, platen gap, drying time, and more. These important controls used to be available in the printer driver menus. Now, they are contained in these EMY files and are activated when you choose them as a Media Type. [READ THIS EMY FILE EXPLANATION](#)

Paper	Generic Media Setting Rec	Special
68lb. UltraPro Gloss	Premium Photo Paper Glossy	
60lb. & 42lb. Pecos River Gloss	Premium Photo Paper Glossy

Blanco Matte Canvas	Canvas Matte	Thick paper

Handling Guides

Check our website to see if your paper has a Handling Guide. Guides contain important information and helpful tips. www.redriverpaper.com/guides

Palo Duro Baryta Fiber Notes

Remember!

Just like darkroom paper, Palo Duro Baryta is a sensitive material and should be handled with care.

REDUCE COLOR DENSITY

Epson printers tend to put down a great deal of ink with the media setting required for this paper. As a result, with large sheets with full coverage you may see slight ripples.

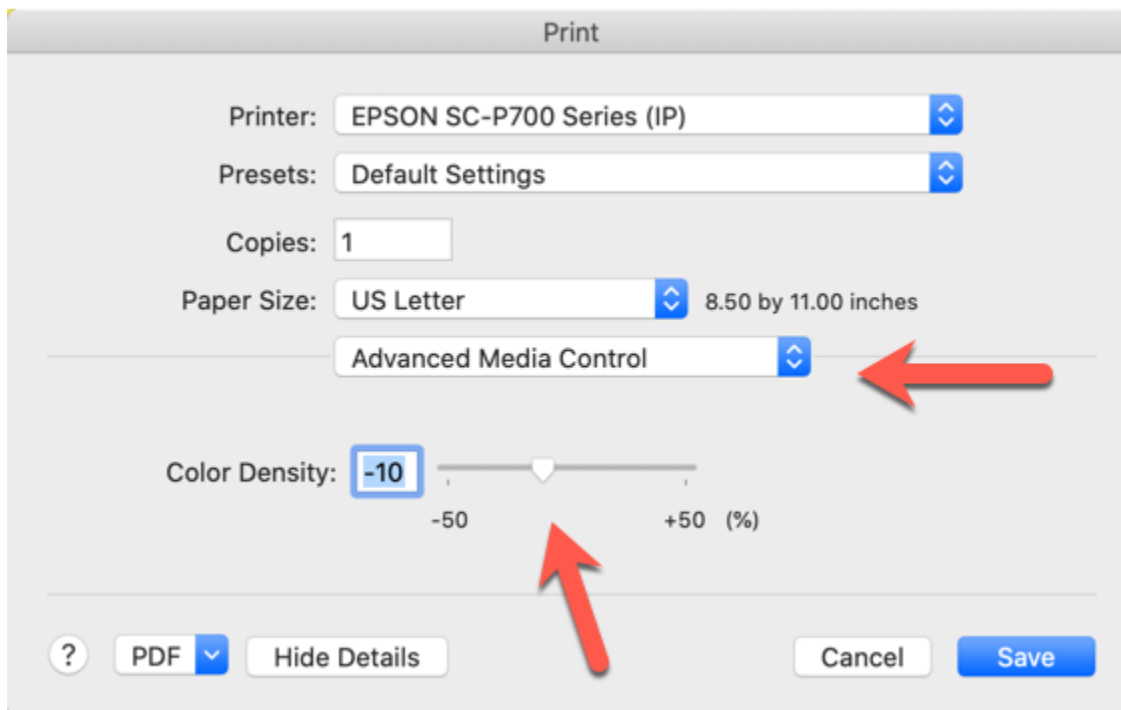

You can avoid this issue by reducing Color Density. We recommend starting at minus 8 and go now lower than minus 15. See below for how to adjust this setting.

FEED INTO THE FRONT PAPER PATH

Palo Duro is a thick paper. For sheets over 8x10, feed it into the P700's Front Paper Feeder.

MAC - ADVANCED MEDIA CONTROLS

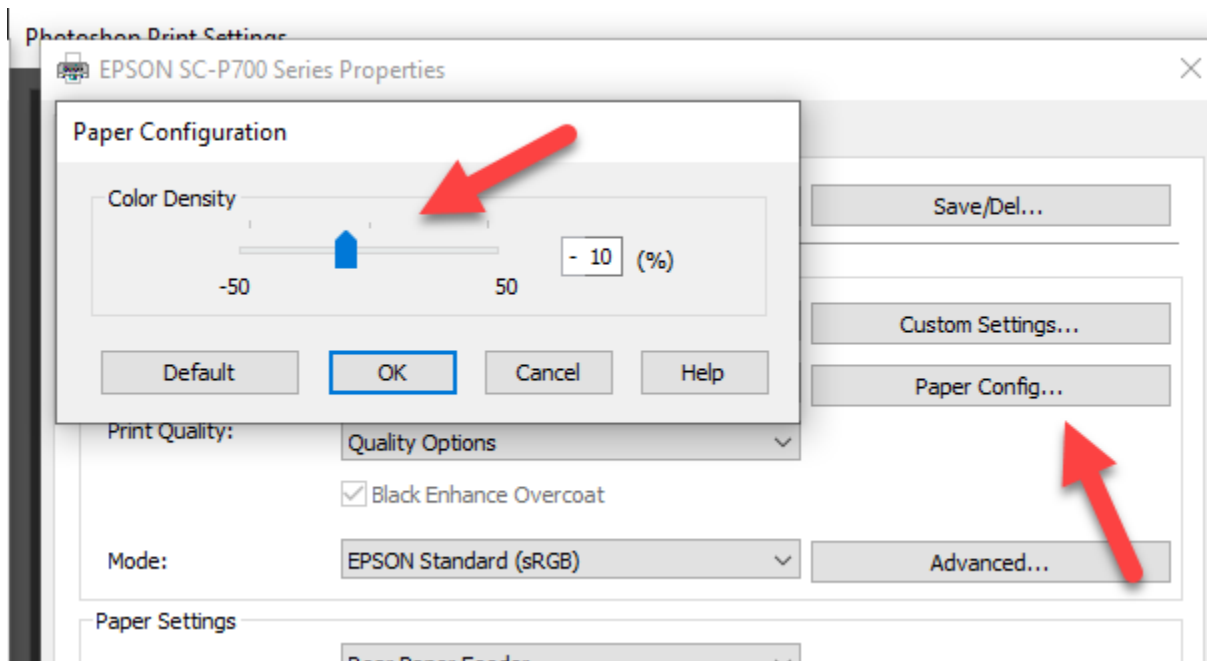

Epson includes important controls for Color Density in this menu.

WINDOWS – PAPER CONFIG

From the Main tab locate and click on the Paper Config button.

You will find Color Density controls in the Paper Configuration dialog.
